Elements made from metal or hardened steel
- ④ **Springs**
Element within the control pins designed to move the core and housing pins into the correct locking position
- ⑤ **Horizontal and vertical profile pins**
Control points for key authorisation

SYSTEM IX DAS

DOM ix DAS

The system that goes the extra mile.

SECURIDEV EDV-Nr. 297956 Rev. C / en / 2 / 08.14 Subject to technical alterations.

THE LOCKING SYSTEM

One key, all round protection.

DOM ix DAS reversible keys can be rotated and operated in whichever direction you choose. The days of heavy key rings are long gone with this practical, user friendly and convenient solution. Whether for your front door, cellar door, window lock, post box or garage door this innovative locking system is the key to securing your home.

SECURITY FEATURES

With the DOM Security card, you're in control.

When ordering your ix DAS locking system you will receive a unique identity card for single coded systems and a service card for master key systems. This registration card is your security against unauthorised duplicate keys and must be presented to your DOM dealer in order to obtain replacements, so you can feel secure and in control.

OVERVIEW

The benefits for you

- ✓ **High level of security**
The high number of locking authorisations (21) protects against modern methods of manipulation.
- ✓ **High level of key copy protection**
The special high-deep milling of the key prevents the creation of duplicate keys.
- ✓ **Long term patent protection**

VERSATILE AND DISTINCTIVE

Benefits that really pay off

-  **Standard coupling:** A double cylinder cannot be operated if a key is inserted on the other side.
-  **Drill protection:** Internal element designed to protect against drilling of the cylinder.
-  **Double entry:** A double cylinder can be operated even if a key is inserted on the other side.
-  **Copy protection:** The features within the key which prohibit key copying using a conventional machine.
-  **Master key:** Central lock, master key or grand master key systems can be produced.
-  **Security standards:** The locking system complies with norm DIN EN 1303.
-  **Finishes:** The cylinder can be supplied in a variety of different finishes (electro plated).
-  **Patent protection:** The locking system is patent protected against copying until the year stated.
-  **Design:** DOM offers a range of designs according to the door or lock case requirements.
-  **Modular option:** Optional, flexible, adaptable cylinder lengths and increased pull and snap protection.
-  **Security card:** Duplicate keys can only be ordered on supply of the registration card.

EL5 compatible: The mechanical system can be combined with DOMELS products (e.g. DOMProtector®).
